

# SHREYA CHOWDARY CHENNUPATI

+1 612 499 0551 — shreyachennupati8@gmail.com — linkedin.com/in/shreyachowdarychennupati/

**Software Developer** with strong foundations in **Python, backend development, REST APIs, and distributed systems**. Proven experience building **scalable microservices**, data pipelines, and production-ready systems, with hands-on exposure to **cloud deployment, system design, testing, and debugging**. Experienced in Agile development, version control, and end-to-end software delivery.

## EDUCATION

|                                                                                                              |                          |
|--------------------------------------------------------------------------------------------------------------|--------------------------|
| <b>University of Florida, Gainesville, FL</b><br><i>Master of Science in Artificial Intelligence Systems</i> | <b>08/2024 – 08/2026</b> |
| <b>Keshav Memorial Institute of Technology, Telangana</b><br><i>Bachelor of Technology</i>                   | <b>08/2020 – 06/2024</b> |

## SKILLS

**Languages:** Python, Java, Go, C, C++, SQL, JavaScript, TypeScript  
**Frameworks & Development:** Spring Boot, Django, React, HTML, CSS, Bootstrap, JFrame  
**Version Control & Tools:** Git, GitHub  
**Cloud & DevOps:** AWS (EC2, S3, Lambda), Microsoft Azure, Docker, Kubernetes, CI/CD (Azure DevOps), Maven, Firebase  
**Core Concepts:** Data Structures, Algorithms, Distributed Systems, Operating Systems, OOP, REST APIs, Microservices, System Design, Agile/Scrum, Testing, Debugging, Machine Learning

## PROFESSIONAL EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                      |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------|
| <b>Wislogix Consulting</b><br><i>Software Engineering Intern — AI Systems</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>05/2025 – 08/2025</b><br>Irmo, SC |
| <ul style="list-style-type: none"><li>Architected backend components for <b>AI-enhanced outreach systems</b>, increasing voter and donor contact efficiency by <b>15%</b> and improving targeting accuracy by <b>12%</b>.</li><li>Streamlined <b>data ingestion and validation pipelines</b> for <b>1,000+ records</b>, resolving <b>100+ data inconsistencies</b> and saving <b>10+ engineering hours per week</b>.</li><li>Analysed <b>AI-driven personalization services</b> (targeting logic, email automation), reducing rollout time by <b>35%</b> and increasing email open rates by <b>18%</b> and CTR by <b>15%</b>.</li><li>Built <b>RESTful APIs and real-time analytics dashboards</b>, enabling backend observability (logging/metrics) and faster, data-driven decisions.</li></ul> |                                      |

## PERSONAL PROJECTS

|                                                                                                                                                                                                                                                                                                                                                     |                          |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|
| <b>Driver Drowsiness Detection System</b><br><i>Computer Vision — Deep Learning</i>                                                                                                                                                                                                                                                                 | <b>01/2024 – 03/2024</b> |
| <ul style="list-style-type: none"><li>Engineered a <b>real-time drowsiness and emotion detection system</b> using <b>10,000+ facial images</b>, improving inference speed by <b>25%</b>.</li><li>Established preprocessing and model-serving pipelines; evaluated performance through <b>120+ user tests</b> under real-time constraints.</li></ul> |                          |
| <b>Hand Gesture Recognition System</b><br><i>Machine Learning — TensorFlow</i>                                                                                                                                                                                                                                                                      | <b>10/2023 – 12/2023</b> |
| <ul style="list-style-type: none"><li>Constructed a <b>CNN-based gesture classification pipeline</b>, using Tensor Flow, Pytorch and Scikit-learn achieving <b>86% accuracy</b> through data augmentation and model tuning.</li><li>Refactored training and evaluation workflows to support rapid experimentation and reproducibility.</li></ul>    |                          |
| <b>Attendance Management System</b><br><i>Backend Development — Java</i>                                                                                                                                                                                                                                                                            | <b>06/2022 – 07/2022</b> |
| <ul style="list-style-type: none"><li>Delivered a <b>Java and MySQL backend system</b> automating QR-based attendance tracking, reducing manual effort by <b>35%</b>.</li><li>Added secure authentication, data storage, and dynamic report generation to improve reliability and data integrity.</li></ul>                                         |                          |
